

stoble

The Stoble identity system is much more than a wordmark. It’s a comprehensive scheme composed of multiple elements that come together to create a distinct look and feel that makes the Stoble brand instantly recognizable. This guide covers all brand elements including logo applications, color, typography, packaging, and all of the systems therein. This style guide will assist you in designing consistent branded communications with plenty of creative flexibility.

This is a living document and should be revised as work is done to maintain a cohesive, consistent experience.

Our brand positioning is the unique impression we create in our customer's mind. It demonstrates our unique advantage over the competition.

brand positioning

Also known as core values, brand attributes represent the essence of a brand. The brand attributes are a set of characteristics that identify the physical, character, and personality traits of the brand, similar to the attributes that allow us to consistently identify individuals.

outgoing/playful

We have great coffee, but the real magic is the community we’re founded on and that we continue to build. Every cup of coffee is an opportunity to help build relationships and have a bit of fun. We’re here to bring a smile to your day.

inclusive

In an industry where you need to already be in the club to be invited in, all of our interactions are open and friendly to all. Our goal is to make everyone feel that they are in the know about what makes coffee good.

everyday indulgence

As more people move from 2nd to 3rd wave coffee, we want to give them a new daily ritual of brewing (or picking up) higher quality coffee. In our frenzied lives, it's a chance to slow down and enjoy the simpler things in life.

progressive

We value everyone who works here, and we strive to pay fair wages, provide opportunities for growth, and support a healthy work/life balance. We're also not afraid to voice support for causes we believe in.

transparent

We tell it like it is, and we will never hide our practices or supply chain from our customers. At the end of the day, the more people who understand the logistics of coffee, the better the whole system becomes.

The brand personality associated with Stoble permeates through all elements of the identity. These are constants, and they provide reliable check-backs when considering how the brand is applied visually.

welcoming
creative
intelligent
strong
genuine

Words matter. The way we speak is just as important as our brand colors, typography, and logo. Stoble speaks like a good friend who is easily relatable and able to see the glass (or coffee mug) half-full. We always hold the hope that our lives and the coffee industry at large can begin to change for the better with something as simple as a good, honest cup of coffee. We sincerely believe that we are better together.

Pro Tip:
When handling more educational information, don't shy away from technical words, but pair them with a friendly tone and conversational vocabulary.

friendly
enthusiastic
“real talk”
sense of humor

Our wordmark is the most recognizable visual asset in the brand identity and therefore must be applied with consistency.

wordmark

The Stoble wordmark is one of the most recognizable visual assets in the brand identity and therefore must be applied with consistency.

stoble

The Stoble symbol is the initial “s” taken from the wordmark. It is a shorthand mark for moments when the full logo is not able to be used, such as a site favicon, etc.

The Stoble subbrand logos use the Stoble wordmark and adds a second word (“workplace,” “events,” etc.) in the brand serif, P22 Mackinac Book.

The lighter weight of “workplace” complements the Stoble wordmark so that Stoble remains the most prominent element of the lockup.

stoble events

stoble
events

The space surrounding the logos is equally as important as the elements themselves. No other graphic elements should encroach upon the safe area.

The safe area exists above, below, and on both sides of the logo. The size of the space is relative to the size of the logo and has equal spacing on all sides. The space is determined by creating a square unit equal to the height of the “s” in the wordmark.

One square unit of space matches the height of the “s” in the wordmark.

The scale of the wordmark should be addressed on a case-by-case basis, dependent on the application it is intended for. This set of rules notes the smallest acceptable sizes in both print and digital applications.

The minimum width of the wordmark should be 0.75” when used for print applications or 72px when used in digital applications.

Pro Tip:

While it may still appear readable at smaller sizes, the wordmark should always carry a strong presence in whatever context it exists. This requires the right sizing and safe space to exhibit hierarchy.

0.75 IN

stoble

72 PX

The layout and application of the wordmark and symbol should always be considered, with the safe area for each taken into account when applying it to collateral. Altering the logo elements or using them in unapproved ways will create brand confusion and interfere with legibility.

The following use-cases apply to the wordmark and symbol:

- 1. Acceptable.
- 2. Acceptable. Overlaying in white is acceptable on photography with clear contrast.
- 3. Do not rotate the mark at an angle.
- 4. Do not stretch the mark.
- 5. Do not embellished with effects like gradients, fills, strokes, or drop shadows.
- 6. Do not place on backgrounds with low contrast (unless specified).
- 7. Do not abbreviate the wordmark or isolate its components (except for the “s,” see page 9).
- 8. Do not watermark or overlay on busy photography or with low contrast.

Wherever possible, the wordmark should always use the brand colors.

The wordmark is most often set in Stoble Navy when used on lighter backgrounds. When a dark background or image prevents the Stoble navy mark from being readable, it is set in white.

The examples at right show examples of suitable color pairs. Clarity is the most important factor and can be addressed by ensuring a high degree of contrast between the mark and the background.

The core assets are key pieces in our identity system. They represent a collection of elements which work together to create unified, consistent, and flexible brand assets that communicate the brand value to the target audience effectively.

core assets

P22 Mackinac:
Headlines, Long-form copy

P22 Mackinac, pronounced “Mackinaw,” is the leading typeface used in the Stoble typographic palette. It is a friendly and welcoming typeface that is used for headlines and long-form copy, especially when the content is more conversational.

It is mostly used in all lowercase, as on the packaging. There may be instances, like the website, where long-form copy is more readable with sentence case. It should never be used in all caps.

Garnett:
Subheads, Short-form copy, Furniture

Garnett is the supporting typeface used in the Stoble typographic palette. It is an approachable, no-nonsense typeface that plays well with Mackinac.

It is never used for large copy like headings, but as a supporting typeface to Mackinac. It is used for subheads, short-form copy, and furniture elements, especially when the content is more informational or technical.

Like Mackinac, it is most often used in all lowercase.

Pro tip:
Garnett includes several arrows that are used throughout the packaging experience. These are accessed in the glyphs panel.

P22 Mackinac:
Headlines, Long-form copy

Garnett:
Subheads, Short-form copy, Furniture

The sizes noted right are for referencing the examples only, not prescriptive.

In some instances, like the business card, you might have a phrase called out of the body copy in Garnett like shown right. In that case, Garnett should be roughly 90% of the size of Mackinac to seamlessly integrate. Adjust if needed to ensure the x-height of both typefaces is the same. (This means literally that if an “x” from both typefaces sat beside one another, they would be the exact same height.)

Note on leading:
In some programs, it's easy to adjust leading to defaults like "1.5" or "double," so that the space between lines increases. For the Stoble brand, leading should not be that generous in any application. It should also not be so tight that letters overlap. The leading shown right is roughly 1.25 times the size of the text.

Pro tip:
When using the arrows with Garnett, add a second space on either side between words and the arrow.

Furniture, Garnett Regular, 14.75px over 18px line height, 0px tracking, lowercase

Color is an integral part of the Stoble identity. It defines both the brick-and-mortar and the packaging experience, differentiating it on the store shelf.

The brand's primary color is Stoble Navy. The color is consistent across all applications for the brand and was selected to match with existing applications, such as the café sign board and building exterior.

The mid gray is on the double origin packaging as the flood background. It may be used as a supporting color to the navy, but should not be used in a leading role.

The light-gray is a neutral that is able to be used throughout applications. In some cases the Stoble Navy on exact white has an austere effect. Replacing stark white with a light-gray has a more approachable feeling.

The secondary color palette is complementary but not identical to the café/workshare build out. They were selected to represent and differentiate the six unique roasts. The Stoble Navy was not used for this reason; it represents the brand at large, not a singular roast.

When color is playing a strong role in representing the brand, the navy is always recommended. The secondary palette is utilized with its correlating roast 90% of the time. Additional applications, like merch, is more open for color usage and not necessarily assigned to specific roasts.

These colors were carefully selected together as an earthy and bright palette. While they vary in range between light and dark, the saturation is visually consistent across the set.

Note application:

When using the secondary palette as flood backgrounds, overlaid text is most often a lighter shade of that color.

For print applications using PMS, like the packaging labels, it is a tint percentage (also called out on page 26 in detail). For digital applications, like social media, the color codes of those tints are listed to the right.

The "Better Together" tag has various lockups. The different formations play with the position of the letters and the arrangement of the words, mirroring the idea that we are always better together, no matter the circumstance.

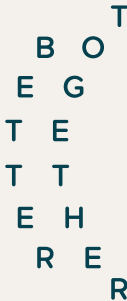

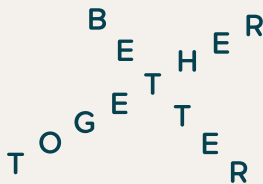

The primary lockup is used on the back of the bags as a hidden moment, discovered as the customer opens the bag of coffee.

Secondary lockups live on social posts, merch, etc. and are able to be replaced and interchanged.

Primary →

Secondary →

Bag → Mural Illustration

The illustrations for Stoble are clean, but textured with a hand-drawn approach. They are overlapping vignettes of the community and coffee experience at Stoble, with Easter eggs and nods to the brand story.

Currently, the murals are only used on the packaging gussets. They provide a moment of surprise and delight to consumers, complementing the accessible design on the rest of the packaging.

They are printed in the Stoble Navy on both bags — double origin and single origin.

Production Note:

Since both bags have the same illustrations, they are able to share custom plates in print production with Savor Brands.

Bag, Left Side

Bag, Right Side

Spot Illustrations

The same style applies to smaller illustrations, like the tasting notes on the website.

Pro tip:

When drawing a spot illustration, keep the linework simple. Small details (like the cherry stem dimples) can be included, but not every texture needs to be fully outlined (like the cherry shadows).

Use the texture for shadows and highlights (Row 1), not just as a coloring book fill (Row 2).

Following the Goldilocks rule, only use the medium level of texture for spot illustrations (Row 1). Dark is too dense, hiding linework details; light is too faint and does not match the full illustration style (Row 2).

Row 1 →

Full Illustration → Texture

Device	Laptop/Desktop
Program	Photoshop
Densities	Dark, Medium, Light

Pro tip:
After drawing the linework, use a paint brush in Fresco to map out the different spaces for texture. For the full illustration style, use three distinct colors and separate by layer.* A simple opaque and smooth edge brush will work best to color block.

When the file is exported as a PSD to desktop, the layers will be intact and allow you to use the color blocks as masks for the three different textures. Adjust as needed in Photoshop.

*For spot illustrations, use one color in Fresco and only apply the medium texture in Photoshop.

The Stoble social media assets are one of the main ways to reach the target audience. They must be applied with consistency and consideration.

social guidelines

The Stoble social profiles show the logos in light gray on a Stoble Navy background.

The color palette is an important tool in differentiating the brand, so always use the brand colors when creating profile imagery.

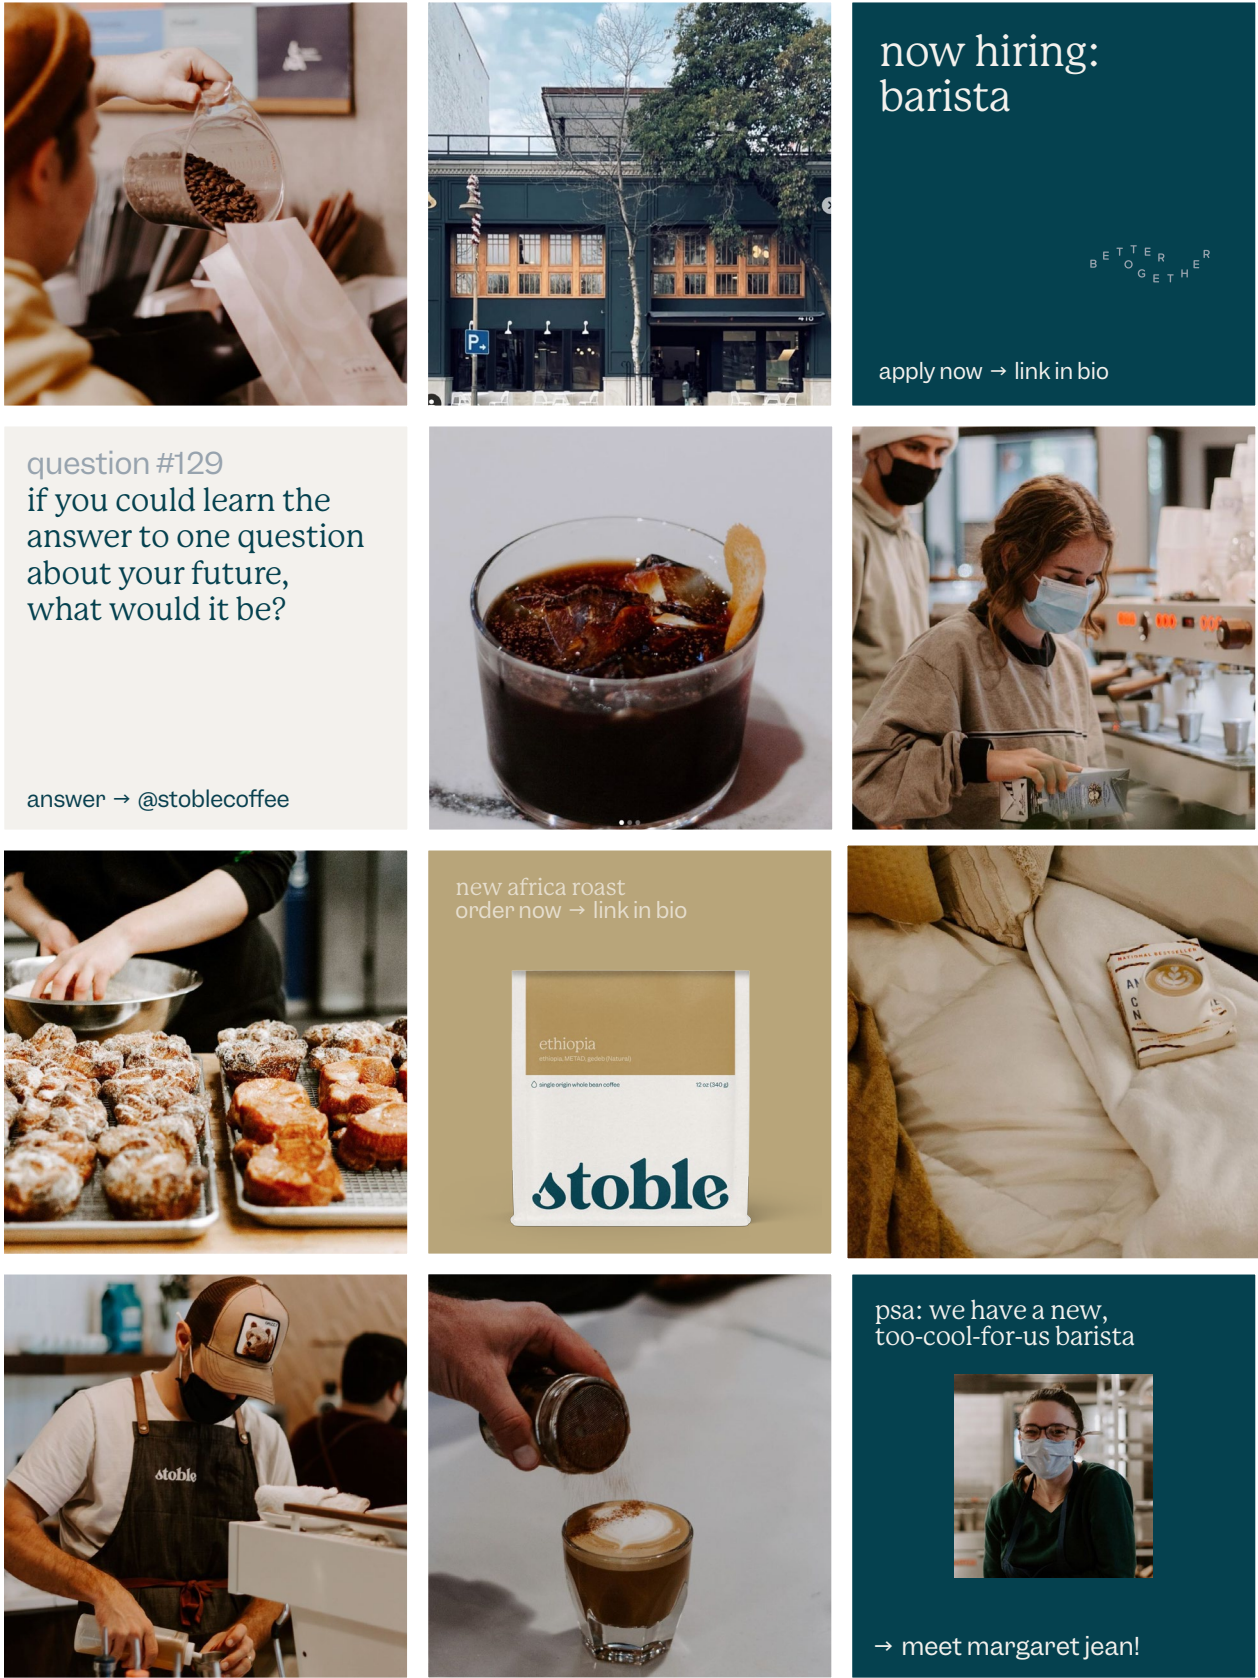

Utilization:

The sample feed previews photography to templated posts at a ratio of 2:1 for proof of design. In practice, templated posts should be used less frequently, more to a ratio of 5:1 or greater. Since Instagram is predominantly a photography platform, use the templated posts to call out specific information that photography would be unable to convey: hiring, events, conversation questions, roast update, employee highlights.

Instagram Profiles

Sample feed showing integration of photography and templated posts.

Stoble Instagram posts leverage the primary brand assets to create a supporting graphic system that complements the photography feed.

The brand navy plays the predominant role, with roast colors utilized to highlight updates to the roast origin(s).

A few examples are shown here.

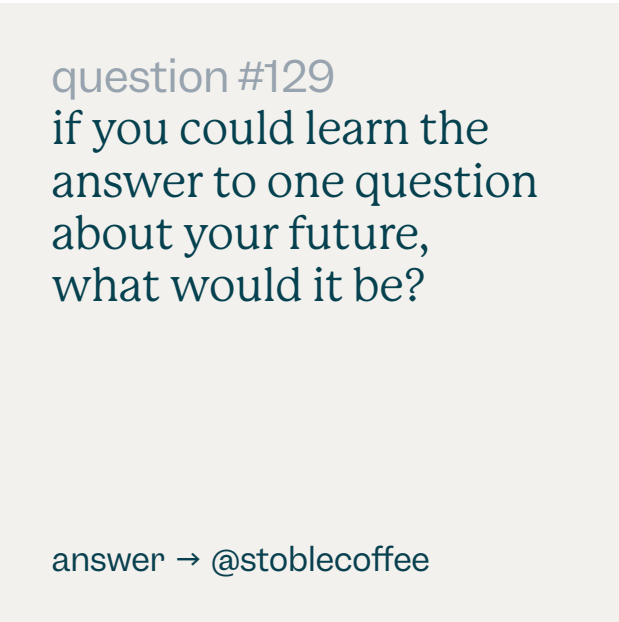

Pro tips:

Alternate the "Better Together" lockup with each new Heading + CTA post.

For conversation questions, encourage users to dialogue in the comments or post to their own feed/stories tagging @stoblecoffee. This will continue to promote the individual post within the algorithm and also introduce new users to the profile.

Heading + CTA

Conversation question

Heading + Image + CTA

Roast update gallery

Stoble Instagram stories follow suit with the feed posts. A few examples are shown here.

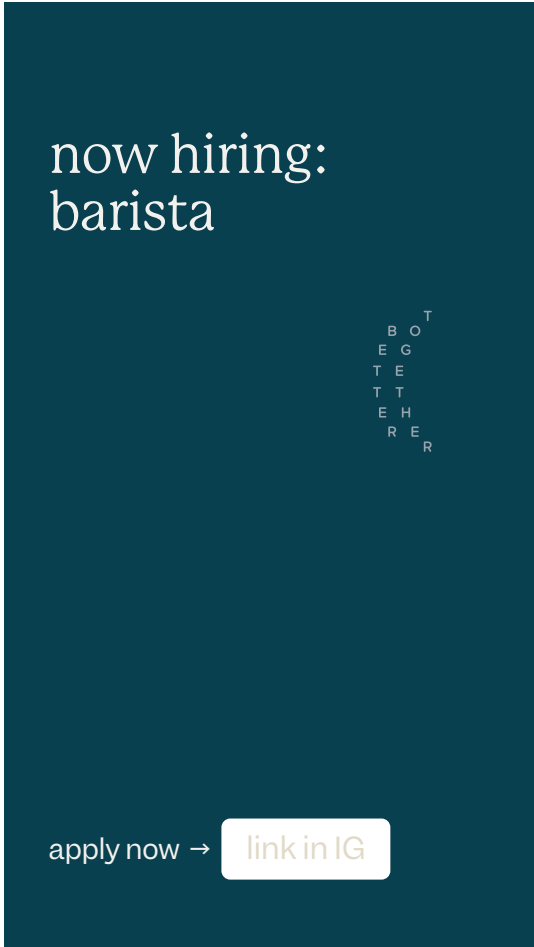

Links:

The story templates leave a blank space for links. Instagram now allows for links to be added on any story. Upload your image to stories, select the sticker icon in the top right, and then select the link button to add.

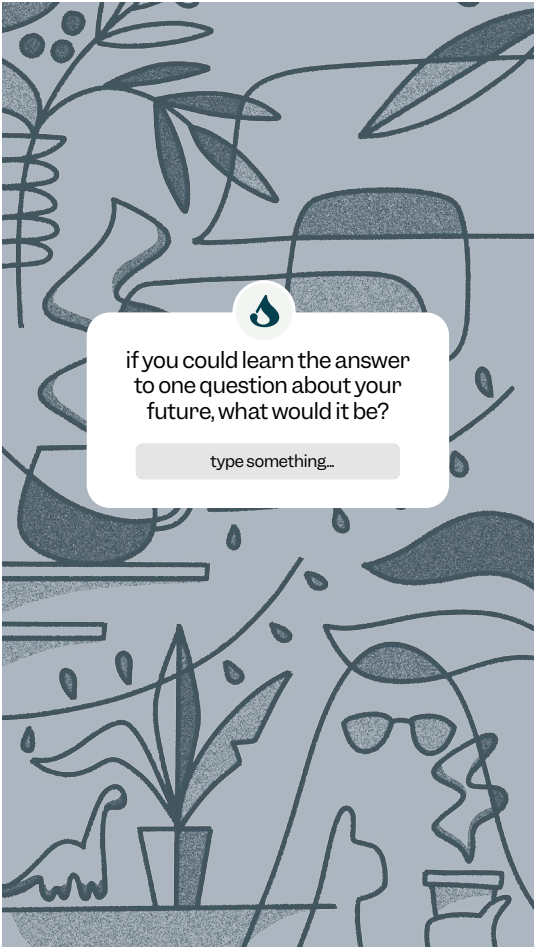

Conversation questions:

For the conversation question, upload one of the full illustrations and use the question sticker (found in the same place as the link button). This feature allows users to directly interact with the story and answers can be re-shared to stories.
